NEW ADDITIONS AND ITEMS OF SPECIAL INTEREST

22 Items (70 F 106 AI thru 70 F 825 AI). Additions to a popular Sub-Miniature series we first listed last year. Page 12.

25 Items (72 F 105 AP thru 72 F 103 AP). Single Pi R.F. Chokes ranging in value from 10 uh thru 1 mh. Page 14.

5 Items (1465-TRD, 1463-T1-PC, 1463-T2-PC, 1463-T3-PC and 1465 TRDPC). Transistor FM I.F. transformers. Page 15.

12 Items (14 series). Top tuned Miniature J-Tran series for general replacement use. These cover 262 kc, 455 kc and 4.5 Mc. Page 25.

12 Items (16 series). Top tuned Miniature Printed Circuit J-Trans for general replacement use. These cover 262 kc, 455 kc and 4.5 Mc. Page 25.

22 Exact replacement Transformers and Coils for use in Admiral, Bendix, GE, Philco and Westinghouse home radios, auto radios and TV sets. Page 25.

1 Item. A new filter which offers a much higher attenuation of the 10 kc beat note, while leaving the remaining audio frequencies virtually unattenuated. Page 29.

HIGH FIDELITY BROADCAST BAND AM TUNER AND TUNER KIT

Miller No. 595 Tuner

The most amazing High Fidelity Broadcast tuner ever offered to music lovers anywhere. Exceptional tonal quality, selectivity, and sensitivity are the outstanding features of this tuner.

Two high-Q ferrite antenna coils, tuned with a two-gang condenser and coupled together with a special mutual coupling coil, produce a broad tuning characteristic with no sideband cutting. Sensitivity is a neat compromise between being high enough for local stations and low enough to reject spurious signals. The audio response of the tuner is not limited by any design factors. It will faithfully reproduce any signal it receives.

Having no tubes or power supply, the tuner is completely free of hum and tube microphonics. Because of its broad band-pass and absence of tube noise or A.C. hum, the 595 is especially recommended as a companion to an F.M. tuner for High Fidelity Binaural reception.

The 595 may also be used as a selective crystal set in rural areas. With sufficient outside antenna and external ground, signals in excess of 600 miles have been received.

The tuner is available in either an ebony black or ivory bakelite cabinet. For custom installations it may be easily removed from the cabinet.

The No. 595 negative mutual coupled Broadcast band-pass tuner has the following features:

- | | |
|--------------------------|-------------------------------------|
| 1. No power requirements | 6. Life time trouble free operation |
| 2. Selectivity (20KC) | 7. Nothing to cause distortion |
| 3. Freq. 540 KC-1700 KC | 8. Gain control |
| 4. No noise | 9. Vernier dial |
| 5. Low cost | 10. Compact (4"x7"x3 1/2" deep) |

Miller No. 565 Tuner Kit

The Miller #565 tuner kit is the result of masterful engineering and planning. Previously sold only as a factory assembled unit (#595), the tuner received such overwhelming acceptance that we have been prompted to release it in kit form.

This tuner kit will also make a fine deluxe earphone receiver (earphone adapter available as part #2705. Net price \$1.20) for children whose parents don't want them playing with electricity and dislike spending money repeatedly for batteries.

Assembly and wiring of the tuner is not difficult. Every precaution has been taken

to assist the builder in completing it. The instructions supplied with each unit presume no previous electronic experience. Photographs and "exploded" pictorial views show exact location of parts.

The audio output of the tuner is proportional to the input signal and will vary depending on the power and location of the station and the length of antenna used. Using an outside antenna approximately 75 feet in length, the output varies from about .07 volts to .7 volts for stations within a 25 mile radius. Also a good bet for emergency civil defense use on the two broadcast-band CONELRAD frequencies.

The kit is supplied with all necessary parts and instructions. A beautiful ebony black or ivory cabinet is supplied with each unit.

All parts for the 565 Kit may be purchased separately and will be found listed in the index at the back of this catalog.

Cat. No.	Description	NET Price
565	Tuner Kit	\$17.70

Phono Plug Adapter

The 2705 is used to adapt a phono plug to standard pin tips such as are used on test leads and earphones. Provides a convenient means of connecting amplifiers and other audio equipment to test instruments or tuners. Nickel plated brass housing.

Dimensions: 1" diameter x 1 1/2" long.

Cat. No.	Description	List Price
2705	Phono plug to Phone Tip Adapter	\$2.25

Cat. No.	Description	NET Price
595	Complete tuner, wired and tested	\$21.75

Ruling (#307), by the Internal Revenue Service, all tuners and tuner kits are subject to a 10% excise tax effective July 5, 1956.

Sub-Miniature Adjustable R.F. Coils

The following permeability tuned coils wound on silicone impregnated ceramic forms will find many applications where space restrictions rule out the use of the larger size coils in the 4400 and 4500 series. These coils mount by means of a bushing which requires an 11/64" hole.

Dimensions (form): 3/16" diameter x 5/8" long. Schematic No. 5.

Miniature Adjustable R.F. Coils

A new series of small adjustable coils designed for the most exacting requirements. Wound on silicone impregnated high grade ceramic forms. Tuning is by means of a powdered iron core. These coils require little space and are for mounting in a 3/16" diameter hole.

Dimensions (form): 1/4" diameter x 7/8" long. Schematic No. 5.

Economy Adjustable R.F. Chokes

Through the use of a recently developed Nylon molding process we are able to offer an inexpensive line of adjustable chokes. These items feature a wide inductance range which has been achieved through the use of a threaded ferrite core.

They can be adjusted from either the top or bottom. This lends a degree of flexibility to your design. Mounting is achieved by means of a metal clip in a 5/16" round hole or a special keyed hole. Instructions supplied with each coil.

Dimensions: 3/8" x 1 3/8" long.

Standard Adjustable R.F. Coils

This series of variable inductors offers a higher Q coil with a slightly larger inductance range than can be obtained in either of the two smaller series. The same high grade silicone-impregnated ceramic forms are used in their construction to insure a product of high quality. These coils mount by means of a bushing that requires a 1/4" diameter mounting hole. Hardware consisting of nut, lock washer, and spring clip is supplied.

Dimensions (form): 3/8" diameter x 1 1/8" long. Schematic No. 5.

Frequency Selective R.F. Chokes

Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designers task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

Part No.	Inductance	Freq. Mc	List Price

The above R.F. Chokes have a conservative rating of 600 ma.

Ceramic Form R.F. Choke

A series of high quality fixed coils wound on a silicone impregnated steatite form. The coils are the standoff type and are mounted by a single 6-32 screw. They find primary application in low power transmitters and associated equipment where relatively high current capacity and low distributed capacitance are important.

Part Number	Inductance $\pm 5\%$ @ 1000 Cycles	Resistance Ohms $\pm 10\%$	Rated Current	List Price

Ceramic Adjustable R.F. Coils

A complete series of adjustable R.F. coils wound on a new style ceramic form. By molding ceramic terminal rings and the ceramic coil form as one integral unit we have been able to eliminate the usual brass terminal rings and the attendant adverse effect they have on coil Q and tuning range. The problem of broken coil leads caused by ring slippage during the soldering process has likewise been eliminated. The adjusting stud is held rigidly at any desired setting through the use of a newly designed "Trutorque" tension device which permits firm pressure to be applied to the adjusting stud without the usual danger of stripped threads encountered with the normal tension springs.

Air Core Printed Circuit R.F. Chokes

The following R.F. Chokes have been designed to offer a wide range of inductance values for use in printed circuit applications. Our standard stock of these coils is impregnated with a high grade coil varnish to prevent

moisture absorption. On special orders we can supply these items treated with fungus resistant material, or encapsulated in epoxy resin to meet MIL-C-15305-A.

Coil length: $\frac{7}{8}$ " on all items. Diameter as tabulated.

ADJUSTABLE R.F. COILS

Resinite Adjustable R.F. Coils

*Resinite is a phenolic impregnated tubing which combines the mechanical and dielectric advantages of phenolics with the high dielectric strength, moisture resistance, and non-corrosive properties of cellulose acetate. Resinite can be certified to MIL-P-79B Type PBG. This series features an extremely wide choice of inductance ranges and utilizes only the highest quality commercial materials throughout. They find application where the severe moisture resistant characteristics of the encapsulated units and the mechanical properties of the ceramics are not required.

Encapsulated Adjustable R.F. Coils

"UNISEAL," a recent development of the J. W. Miller Co., has successfully been applied to the production of encapsulated adjustable R.F. inductors. The primary difficulty encountered in the encapsulation of adjustable inductors is the prevention of moisture entering the coil form around the threaded stud. The moisture being subsequently absorbed by the coil form resulting in deterioration of coil efficiency. In an effort to prevent this most manufacturers fill the coil form with silicone grease.

The open end of the form is then plugged and the unit encapsulated. In "Uniseal" the coil form is actually a molded epoxy shell open on

only one end. The open end is filled with silicone grease and bonded to the brass bushing which holds the adjustable core. The grease in this case is not intended to prevent moisture absorption since the coil is completely sealed by the use of the epoxy form. It does serve to provide a smoother turning core. The coil assembly is next inserted into another epoxy shell and the entire assembly filled with epoxy resin. This forms one solid mass of epoxy from the inner coil form to the outer shell. The unit is impervious to moisture and is extremely shock and vibration resistant. The adjusting stud is held rigidly at any desired position through the use of a newly designed "Trutorque" tension device. This device permits firm pressure to be applied to the adjusting stud without the usual danger of stripped threads caused by the tension springs normally used.

RADIO FREQUENCY CHOKES

Encapsulated Radio Frequency Chokes

The following series of R.F. chokes range in value from 0.1 uh to 50 mh. Basically identical to our standard series of axial lead R.F. chokes bearing

the equivalent number, these coils are encapsulated in epoxy resin and conform to MIL-C-15305A. Min. lead length 1".

Sub-Miniature R.F. Chokes

An extremely versatile series of iron core R.F. chokes designed to meet the industries' demand for high reliability, ultra-miniature components. The coils are ideally suited to network and filter design, delay lines, and computer applications. Rated at 50 milliamperes maximum D.C. current they are more than satisfactory for most applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per JAN-T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class B of MIL-C-15305A.

Unshielded Air Core Chokes

Miller duo-lateral wound, single section radio frequency chokes are ideally suited to all receiver and circuit applications. A bakelite terminal plate, $1\frac{1}{8}$ " in diameter, is fastened to the dowel with a tubular brass eyelet, providing for single-hole mounting with a #6-32 machine screw. The choke windings are thoroughly impregnated to prevent moisture absorption. Inductance values are maintained to an accuracy of five per cent.

Dimensions: $1\frac{1}{8}$ " diameter by $\frac{5}{8}$ " high. Schematic No. 1.

Unshielded Iron Core Chokes

Series 900 iron core radio-frequency chokes are of the single section duo-lateral wound type. The core is $\frac{3}{8}$ " in diameter by $\frac{1}{2}$ " long and affords maximum inductance with minimum resistance. Solder terminal lugs are provided on the bakelite terminal plate, and single-hole mounting is provided by a brass eyelet through the center of the core. All chokes are thoroughly impregnated and inductances are accurate to within five per cent.

Dimensions: $1\frac{1}{8}$ " diameter by $\frac{5}{8}$ " high. Schematic No. 3.

Ceramic Core R.F. Chokes

Miller ceramic core radio frequency chokes are the result of careful research and design, and present advantages found in no other comparable chokes. These chokes have extremely low distributed capacity.

Dimensions: (form) 1/4" diameter by 1 1/2" long.

All chokes are impregnated with a moisture- and fungus-resistant varnish. Schematic No. 1.

R.F. Chokes with Axial Leads

These chokes are covering an inductance range from .1 microhenry to 10 millihenries or 5 decades with 8 coils per decade. Inductance values are increasing in steps of appr. 50%. Either single layer or 3-pi universal winding is used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form 3/16" diameter x 3/4" long.
Iron core form 3/32" diameter x 7/8" long.

Leads are 1 1/2" long.

Standard Transistor Antenna Rod

Multi-strand litz wire, wound directly on a low loss ferrite core provides a coil with extremely high Q. This insures a high degree of selectivity at the input of the receiver. Because of its high Q and large pickup area, the #2000 is one of our most popular rods. It has a fixed inductance of 240 uh and covers a band of 540-1650 kc when used with a variable condenser having a range of 15-365 mmf.

Dimensions: 3/4" x 9".					
Cat. No.	Q @ 790 KC	Freq. Range	Tuning Cond. Max. Capacity	Schematic	List Price
2000	450	540-1650 KC	365 mmf.	54	\$3.00

Miniature Transistor Antenna Rods

These coils are designed for use in miniature receivers where space does not permit the use of larger rods. Signal pickup is sufficient so that an external antenna is neither necessary nor is it advised. The #2001 has an inductance of 240 uh and is designed for use with a standard variable condenser having a maximum capacity of 365 mmf. (Miller #2112). The #2003 has an inductance of 700 uh and is for use with a miniature condenser having a maximum capacity of 130 mmf. (Miller #2110). This is the size used in many of the commercial transistor receivers.

Dimensions: 3/4" x 3 3/4".					
Cat. No.	Q @ 790 KC	Freq. Range	Tuning Cond. Max. Capacity	Schematic	List Price
2001	550	540-1650 KC	365 mmf.	54	\$2.75
2003	500	540-1650 KC	130 mmf.	54	2.75

Ferrite Strip Transistor Antenna Rods

These coils are wound on flat ferrite strips rather than the normal ferrite rods. Due to this unique physical configuration they are remarkably sensitive for their small size. Signal pickup approximates that of the larger ferrite rods. The #2004 has an inductance of 240 uh and is to be used with a condenser having a maximum capacity of 365 mmf. (Miller #2112). The #2005 has an inductance of 700 uh and is to be used with a miniature variable condenser having a maximum capacity of 130 mmf. (Miller #2110).

Dimensions: 1/4" x 3/4" x 3 3/4".					
Cat. No.	Q @ 790 KC	Freq. Range	Tuning Cond. Max. Capacity	Schematic	List Price
2004	500	540-1650 KC	365 mmf.	54	\$2.75
2005	450	540-1650 KC	130 mmf.	54	2.75

Sub-Miniature Transistor Antenna Rods

Adjustable antenna coils with high Q ferrite cores. Inductance range of part #2002 is 40-300 uh; part #2007 is 150-1000 uh. The inductance ranges shown allow for the use of variable capacitors outside our recommended values.

Dimensions: 1/2" x 2 1/2".					
Cat. No.	Q @ 790 KC	Freq. Range	Tuning Cond. Max. Capacity	Schematic	List Price
2002	250	540-1650 KC	250-450 mmf.	7	\$1.70
2007	220	540-1650 KC	100-250 mmf.	7	2.20

Variable Condensers

A miniature 2-gang variable condenser. The antenna section has a range of 10-130 mmf. The oscillator section has a range of 10-78 mmf. Trimmer capacitors are self-contained and have a range of approximately 12 mmf. Tapped mounting holes provided on front of condenser. Counter clockwise rotation. Shaft is 1/4" dia. x 3/4" long.

Catalog #2112 is a standard size 2-gang condenser having a range of 10-365 mmf. for both sections. Shaft is 1/4" dia. x 1 1/8" long.

Cat. No.	Sections	Dimensions	List Price
2110	2	1 5/16" x 1 3/8" x 1 15/16"	\$3.30
2112	2	2 3/16" x 1 13/16" x 1 5/8"	4.00

10.7 MC Transistor Transformers

A complete series of I.F. Transformers specifically designed for operation with transistors in intermediate frequency stages operating at 10.7 megacycles. Proper impedance matching is assured when these transformers are used with the specified transistor shown on our data sheet. Through the use of a Discriminator, maximum efficiency, and good limiting of the F.M. signal are assured.

Dimensions: 3/4" Sq. x 2" High.			List Price

Sub-Miniature Transistor I.F. Transformers

To our knowledge the smallest I.F. transformers in existence. Cup core construction permits the use of extremely small shields without adversely affecting transformer operation. A high impedance, tapped primary winding coupled to a low impedance secondary provides optimum energy transfer between stages.

Dimensions: 3/8" sq. x 5/8" high.					
Cat. No.	Freq.	Impedance	Use	Schematic	List Price
9-C1	455 KC	25K— 600 Ohms	Input	72	\$4.00
9-C2	455 KC	25K—1000 Ohms	Output	72	4.00

Miniature Transistor I.F. Transformers

Miniature I.F. transformers having tuned primary and untuned secondary windings. The primary winding is tapped for use in circuits which require a tap. In circuits which do not use a tap it is disregarded. Proper impedance match between primary and secondary insures optimum performance.

Dimensions: 1/2" sq. x 3/4" high.					
Cat. No.	Freq.	Impedance	Use	Schematic	List Price
2031	455 KC	10K— 600 Ohms	Input	72	\$3.50
2032	455 KC	10K—1000 Ohms	Output	72	3.50

2051	455 KC	100K—1000 Ohms	Input	72	3.50

Shielded

Sub-Miniature Transistor Oscillator

A deluxe shielded oscillator coil designed for use in a converter circuit employing only one transistor for both the oscillator and mixer. Being identical in size to our 9-C1 and 9-C2 I.F. transformers, the 2021 makes an excellent companion for those components. Designed for use with a condenser having a maximum capacity of approximately 78 mmf. (Miller #2110).

Dimensions: 3/8" sq. x 5/8" high.					
Cat. No.	Tuning Cond. Max. Capacity	I.F. Freq.	Use	Schematic	List Price
2021	78	455 KC	Osc.	72	\$3.50

Unshielded

Miniature Transistor Oscillators

The 2020 oscillator coil (Revised 5-lug) is designed for use in a converter oscillator circuit where only a single transistor is required. The 2023 oscillator coil (6-lug) is for use where a separate transistor is used for the oscillator and another transistor for the mixer. A suitable padder must be used with the 365 mmf. variable. The 2022 is similar to the #2020 except it is for use with a cut section variable (Miller #2110).

Dimensions: 3/8" x 1" high.					
Cat. No.	Tuning Cond. Max. Capacity	I.F. Freq.	Use	Schematic	List Price
2020	365 mmf.	455 KC	Osc.	71	\$2.50
2022	78-100 mmf.	455 KC	Osc.	71	2.50
2023	365 mmf.	455 KC	Osc.	70	2.50

Horizontal Oscillator & Sync. Control Coils

Permeability tuned units for use in horizontal sweep oscillator and automatic frequency control circuits. Contained in aluminum shields with all connections made to terminals located at the top. Mounting is by #6-32 spade bolts on $1\frac{1}{16}$ " centers.

No. 6194 consists of two coupled windings: one, tapped, for use in a horizontal oscillator circuit; the other, center-tapped and balanced for a sine-wave phase discriminator arrangement which combines the horizontal synchronizing pulses with oscillations from the horizontal oscillator to provide control of the horizontal scanning frequency (*Synchrolock*).

No. 6182 contains a tapped oscillator coil for use in a horizontal blocking oscillator. In a typical control circuit, a combination voltage from the synchronizing pulse and from the horizontal oscillator is applied to the grid of a control tube. When, due to incorrect frequency or phase, the combination does not produce the required pulse width, the oscillator tube is biased automatically to re-establish synchronization (*Synchroguide*).

No. 6183 contains a tapped oscillator coil for use in a horizontal blocking oscillator and pulse-width control system, similar to that employing No. 6182 Coil. In addition, there is another winding which, when connected to an external fixed capacitor of .01 mfd, may be adjusted to obtain sine-wave stabilization of the blocking oscillator frequency (*Sync. Freq. and Phase*).

6183 may be reversed in shield for top or bottom mounting.

6183-A. Same as 6183 except coils are reversed on form in order to tune Horizontal Osc. from top or through outside of chassis.

Dimensions: $1\frac{1}{16}$ " by $1\frac{1}{16}$ " by $2\frac{1}{2}$ " high.

Cat. No.	Item	Schematic	List Price
6194	Horiz. Osc. and A.F.C. Discriminator	40	\$3.10
6182	Horiz. Osc. and Sync. Control Coil	44	2.50
6183	Horiz. Osc. and Sync. Stabilizer Coil	43	3.25
6183-A	6183 with horiz. osc. coil position reversed	43	3.25

Adjustable Width Controls

The following series of variable inductors will find a definite place on every service job where it is required to install a new horizontal output transformer. By using the wide inductance range width coils the service technician has the flexibility of choice of taps on the horizontal output transformer, and thus obtain the proper match to secure best operating characteristics. These inductors will also find application wherever a wide inductance range is required in circuits other than T.V. application. They are widely used by experimenters in low frequency oscillator circuits and as adjustable R.F. chokes.

The coils will mount in either a $\frac{3}{16}$ " or $\frac{1}{8}$ " hole with adapter supplied.

Tapped Horizontal Oscillator Coils & Sync. Stabilizer (Ringing Coil)

These unshielded coils are intended for use in the horizontal oscillator section of a T.V. receiver.

No. 6210 has an inductance range of 16-42 millihenries and is intended for use as a stabilizer in multi-vibrator circuits. An external capacitor of .0039 mfd. is required.

Dimensions: $\frac{3}{4}$ " by 2"

No. 6211 is a tapped inductor having an inductance range of 16-42 millihenries. An external capacitor of .0039 mfd. is required.

Dimensions: $\frac{3}{4}$ " by 2"

No. 6324 is a tapped inductor having an inductance range of 60-130 millihenries. An external capacitor of .001 mfd. is required.

Dimensions: 1" by 2"

The above numbers (6210, 6211, 6324) mount into a $\frac{7}{16}$ " chassis hole. No. 6212 is a tapped inductor having an inductance range of 12-35 millihenries. When used in combination with part No. 6314 they form the unshielded version of part No. 6183 (Horizontal Oscillator & Sync. Stabilizer). Mounting is by means of a clip fitting a $\frac{5}{16}$ " chassis hole.

Dimensions: $\frac{5}{8}$ " by 2"

Cat. No.	Item	Schematic	List Price
6210	Sync. Stabilizer Coil	5	\$2.50
6211	Sync. Stabilizer Coil Tapped	7	2.50
6212	Horizontal Osc. Coil Tapped	7	2.50
6324	Horizontal Osc. Coil Tapped	7	2.50

TV Antenna Coupling Transformers

One Miller Antenna Coupling Transformer used to match antenna to line and another to match low-loss line to standard 300-ohm receiver input, may boost signal level as much as four times! The resulting TV picture may be improved to the same degree as if the transmitter had doubled its power! Insertion losses of transformers are very low. Designed to couple 250 or 300-ohm antenna arrays to 72-ohm twinlead, 52-ohm low-loss coaxial cable or 450-ohm open line. At the receiver, a second transformer will match low-loss line to 300-ohm standard receiver input. Transformers are housed in impregnated, weather-tight aluminum shields and may be used outdoors.

Dimensions: $\frac{3}{4}$ " by $\frac{3}{4}$ " by $1\frac{3}{8}$ " high.

Cat. No.	Impedance Ratio	Schematic	List Price
6161	52/300 or 300/52 ohms	38	\$3.00
6162	72/300 or 300/72 ohms	38	3.00
6201	450/300 or 300/450 ohms	38	3.10

Antenna Matching Coils (Balun)

When two of these coils are connected in parallel at one end and in series at the other end, a 75 ohm to 300 ohm impedance matching transformer is obtained. This impedance match holds over the entire television range from channel 2 to 13 thus including the F.M. channels.

The Miller #6202 and #6104 coils can be used to replace the following: RCA #73591, Philco #32-4432-1, -2, -3, #76-7071, and Motorola #S-13.

Part #6202 is wound on a threaded ceramic form to withstand severe temperature changes.

Part #6104 is a smaller, inexpensive balun which finds its primary use as a replacement coil in TV receivers. Wound on low loss styrene.

Part #6200 is used extensively by Radio Amateurs operating on the 50, 144, and 220 MC bands. Wound on low loss styrene. Two mounting brackets are supplied with each coil.

Miller 6103 antenna matching transformer is intended as a replacement item for many Sarks Tarzian Tuners, as a direct replacement for GE part No. RLA-041. Although physically different than those found in many tuners, this assembly will function as a suitable substitute in many sets where a similar antenna matching coil is used.

Cat. No.	Description	Schematic	List Price
6103	Ant. Matching Coil $\frac{1}{4}$ "x $1\frac{1}{2}$ " long	39	\$1.55
6104	Ant. Matching Coil $\frac{5}{16}$ "x $1\frac{3}{4}$ " long	37	1.15
6200	Ant. Matching Coil $\frac{3}{8}$ "x $2\frac{1}{2}$ " long	37	2.25
6202	Ant. Matching Coil $\frac{3}{8}$ "x $1\frac{3}{4}$ " long	37	2.25

40 Mc TV Picture I.F. Transformers

These new transformers are for use in TV receivers having the picture I.F. carrier frequency at 45.75 MC with the sound carrier I.F. at 41.25 MC and the sound intercarrier I.F. at 4.5 MC. The picture I.F. covers a band of 41.75-45.75 MC. With proper circuit capacitances, adjustable windings are tunable within this frequency range. Converter transformer has an iron core tuned primary winding and a 75-ohm output winding. 1st pix I.F. grid transformer has a 75-ohm input winding as well as iron core tuned secondary and trap windings. 1st pix I.F. plate and 2nd pix I.F. grid transformers have each two permeability tuned windings, one of which constitutes a trap. Currently used in R.C.A. models.

Dimensions: $\frac{7}{8}$ " x $\frac{7}{8}$ " x $2\frac{1}{4}$ " high.
6240 Dimensions: $1\frac{1}{8}$ " sq. x $2\frac{3}{8}$ " high.

In case a resistor coil form is specified for replacement purposes, use a shunt resistor of the required value across peaking choke.

44 Mc Miniature TV Picture Transformers

Permeability Tuned

For use in Intercarrier receivers of later design which employ this higher intermediate sound and picture I.F. frequency. Due to their small physical size these coils can be used where space is at a premium.

The converter transformer feeds energy through a 75 ohm link line to a winding of the same impedance on the First Picture I.F. Transformer. Both the Second and Third I.F. Transformers employ a bifilar winding tuned to the desired signal, and a trap winding which is adjusted to attenuate the undesired signals. The Fourth I.F. Transformer has a bifilar wound Primary and Secondary which feeds into the detector. Supplied with snap spring mounting clip which may be installed through suitable holes in the chassis. Also furnished is an adaptor plate for use over a standard tube socket hole.

Dimensions: $\frac{3}{4}$ " sq. x 2" high

Cat. No.	Description	Trap	Schematic	List Price
6230	Converter I.F.		27	\$2.75

6234	44 MC Fourth I.F.		22	2.25

Unshielded 44 Mc TV Picture Transformers

This series of unshielded 40 Mc. video transformers and inductors can be used as replacement components in almost every known type of circuitry found in today's television receivers. Part No. 6220 has a 75 ohm link winding to couple energy from the converter to the grid winding of the first video stage. Part Nos. 6221, 6222, and 6223 incorporate bifilar wound primary and secondary windings, and high "Q" inductively coupled trap windings. Part No. 6224 consists of a bifilar wound primary and secondary winding, while part Nos. 6225 and 6226 are high "Q" single windings that can be used as either traps or capacity coupled I.F. inductors. All coils in this series are permeability tuned, and will resonate with average wiring and tube capacitance to the frequencies indicated.

Maximum Dimensions: $\frac{3}{4}$ " O.D. x $2\frac{1}{2}$ " long. Mounting hole $\frac{5}{16}$ ".

Universal Adjustable Ion Trap

In an effort to help the TV serviceman with his stock problem, we are now in a position to reduce his inventory by adding this universal ion trap to our present TV line. Due to its adjustable feature, which allows the magnetic field to be varied between 32-55 gauss, this trap will, in most instances, replace the older style ion traps having a specific magnetic field.

Packaged in an attractive display carton of 24 pieces.

Cat. No.	Description	List Price
6295	Adjustable Ion Trap	\$1.50

Converter and Picture Channel I.F. Transformers

These three transformers may be used to couple plate of mixer to first video i.f. stage and as interstage coupling in two of the following stages of the picture i.f. channel. Windings are iron core tuned, and without external capacitor are designed to resonate with tube and wiring capacity to the frequencies 21.8, 25.3 and 22.3 mc. All three transformers have slug-tuned traps for response curve shaping and sound or adjacent channel rejection.

Converter transformer has tap on trap for sound take-off to sound i.f. channel at 21.25 mc. Transformer tuning core adjusted from bottom; trap tuning accomplished by stud accessible at top of shield. Dimensions: 7/8" by 7/8" by 2 1/4" high.

Cat. No.	I.F. Frequency	Trap	Schematic	List Price

Picture Channel I.F. Inductors

Unshielded, permeability-tuned inductors which resonate with tube and wiring capacity to the frequencies indicated below. When used with the shielded picture i.f. transformers shown above, they make possible a well designed stagger-tuned video i.f. amplifier of full 6 mc bandwidth. Proper response wave shape thus insured for all possible definition and clarity of the television picture. Coils are wound on bakelite forms with mounting clip to fit into 7/16" hole in chassis. Dimensions: 1/2" max. o.d. by 1 1/2" long.

21.25 Mc Television Sound

I.F. Transformers

These permeability tuned transformers are intended for use in T.V. receivers where a separate sound amplifier is employed.

The 6190 and 6191 feature high gain along with adequate bandwidth.

The 6192 discriminator is of the Foster Seeley type. Two stages of amplification and one limiter stage should precede it.

The 6170 is for use in the unbalanced type of discriminator circuit. (Same as RCA-75212.)

The 6184 ratio detector requires at least a one or two stage amplifier preceding it to insure proper operation.

Dimensions: (6190, 6191, 6170) 7/8" sq. x 2 1/4" high. Mounting centers 1".

Dimensions: (6184 & 6192) 1 1/8" sq. x 2 1/2" high. Mounting centers 1 1/8".

Dimensions: (6261 and 6262) 3/4" sq. x 2" high. Clip mounting.

Manufacturers' Part Numbers Are Cross-Referenced in Our Latest TV Coil Replacement Guide

High-Q Ferrite Antenna Coil

This new highly efficient broadcast band antenna coil is ideal for use in small receivers where no external antenna is desired and the dimensions of a loop antenna do not allow for sufficient signal pickup. The following features contribute to the extraordinary performance:

High permeability, low-loss ferrite tuning core, combined with multi-strand Litz wire, giving a very high-Q coil (approx. 250).

Universal progressive winding for low distributed capacity and low losses at high frequencies.

Polyethylene insulated antenna wire; 18" of this wire is supplied with the coil.

The inductance may be accurately adjusted with a screw driver for use with any variable capacitor having a maximum capacity between 350 and 450 mmf. The mounting clip fits into a $\frac{5}{16}$ " diameter hole.

Dimensions: $\frac{3}{8}$ " diameter x $2\frac{1}{4}$ " long.

Packaged in an attractive display carton of 24 pieces.

Cat. No.	Use	Frequency Range	Schematic	List Price
6300	Antenna Stage	540-1700 KC	5	\$1.40

Autodyne Oscillator Coil

This oscillator coil finds application as a general replacement item in receivers using an autodyne type mixer oscillator circuit. This coil may be used in conjunction with our 12-C12 I.F. transformer. The oscillator coil will track with cut section variable capacitors having a maximum oscillator capacity between 100 and 200 mmfd.

Dimensions: $\frac{3}{8}$ " x 1" Mounting clip fits $\frac{5}{16}$ " dia. hole.

Cat. No.	Use	Freq. Range	Schematic	List Price
67 OSC	Oscillator	R.F. 540-1605 kc	113	\$1.95

Miniature I.F. Transformers

Designed for experimental use and for general replacement in "personal" radio receivers, this series of shell core permeability tuned transformers are becoming increasingly popular. Tuning from top and bottom of the shield. Transformers are available for all standard I.F. frequencies. Supplied with a mounting clip which may be installed through suitable holes in chassis.

*(With diode filter capacitors)

Dimensions: $\frac{3}{4}$ " by $\frac{3}{4}$ " by 2" high.

R.F. Transformer for HV Power Supply

These R.F. power supply transformers for use with television receivers and cathode ray oscilloscopes make it possible to construct an inexpensive source of high voltage DC. Two types are available, the #4525 for voltage to 5000 DC and the #4526 for voltages to 10,000 DC (or 30,000 DC in a voltage rectifier tripler circuit). Type 1B3-GT tubes are used as rectifiers and the R.F. oscillator circuit uses one or more type 6V6 or 6Y6 tubes connected in parallel. The high frequency AC source permits use of simple and inexpensive resistive capacitive filters with low ripple content in the output.

Cat. No.	Item	Schematic	List Price
4525	H.V. R.F. Trans. (to 5 KV)	52	\$9.25
Dimensions: $1\frac{1}{4}$ " diameter x $3\frac{3}{4}$ " high. (Not Illustrated)			
4526	H.V. R.F. Trans. (to 30 KV)	52	\$15.00
Dimensions: $2\frac{1}{4}$ " diameter x 6" high. (Illustrated)			

Miniature Adjustable R.F. Coils

Their small physical size and the fact that they can be adjusted to the inductance required, make these coils ideally suited for replacement in broadcast band receivers. Antenna and R.F. coils have high impedance primaries and high-Q Litz wire wound secondaries for use with any variable condenser having a maximum capacity between 250 and 450 mmf.

The 70 Oscillator coil has a primary and a tapped secondary, while the 69 Oscillator has a capacity coupled winding. These coils are for use in all common padded and unpadded oscillator circuits. They may be adjusted to track with I.F. amplifiers between 100 and 550 Kc.

Dimensions: $\frac{1}{2}$ " diameter x $1\frac{1}{2}$ " long (Nos. 70-A and 70-RF).

$\frac{1}{2}$ " diameter x $1\frac{1}{8}$ " long (No. 69-OSC. and No. 70-OSC)

$\frac{3}{4}$ " diameter x $1\frac{3}{4}$ " long (No. 71 RF)

Cat. No.	Use	Frequency Range	Schematic	List Price
69-OSC	Oscillator	540-1600 KC (I.F. 100-550 KC)	96	\$1.75
70-A	Antenna	540-1600 KC	48	1.75
70-RF	R.F. Stage	540-1600 KC	48	1.75
70-OSC	Oscillator	540-1600 KC	71	1.75
71-RF	R.F. Coil	540-1600 KC		2.75

Universal Adjustable Oscillator Coil

It will be difficult to find a broadcast band receiver where this oscillator coil will not properly operate. It has a primary with 2 taps thus allowing 6 different feed-back combinations, including cathode coupling. It may be adjusted for any intermediate frequency within the range of 100-550 KC; it will track with variable condensers having a maximum value between 250 and 450 mmf in padded circuits and between 100 and 200 mmf in unpadded circuits. Mounting clip fits into a $\frac{5}{16}$ " diameter hole.

Dimensions: $\frac{5}{8}$ " by $1\frac{1}{2}$ " high.

Cat. No.	Use	Frequency Range	Schematic	List Price
71-OSC	Oscillator	R.F. 540-1800 KC (I.F. 100-550 KC)	93	\$2.50

Loop Antenna

The Miller No. 703A Loop Antenna utilizes the patented "Air Loop" construction which provides high Q and mechanical rigidity. The loop conductors are embossed into the surface of the masonite backing plate which, in many cases, may be used as a back cover of midjet radio receivers. The Q

of the loop is 150 at 790 KC and is substantially uniform throughout the standard broadcast band. The loop as supplied has a secondary inductance of 253 microhenries.

Dimensions: $8\frac{1}{8}$ " wide x $5\frac{3}{8}$ " high x $\frac{1}{8}$ " thick.

Cat. No.	Use	Frequency Range	Schematic	List Price
703A	Loop Antenna	540-1700 KC	76	\$3.25

Ferrite Rod Loop Antenna

The electrical characteristics of this newly developed type Ferrite Rod Loop Antenna make possible a general replacement loop that offers outstanding performance.

Reception of distant stations will be improved to the extent that no antenna or ground will be required, and on local stations much better reception will be insured. The Loop Rod Antenna has an adjustable inductance which makes it possible to peak the antenna stage by merely sliding the coil along the ferrite rod; this also enables it to be used with a variety of tuning condensers.

Loop tunes the B.C. Band with 300 to 400 mmf. Variable condenser.

Cat. No.	Dimensions	Schematic	List Price
705-A	$3\frac{1}{4}$ " x $9\frac{1}{2}$ "	48	\$3.00

Prices Subject to Change or Withdrawal Without Notice

Miniature High-Q R.F. Coils*(Permeability-Tuned)*

Using cup core construction, we offer a shielded Antenna and R.F. coil in a $\frac{3}{4}$ " sq. shield with Q values resulting in material gain ahead of the mixer stage. An adjustable tuning core allows the inductance to be varied over sufficient range for use with the more popular variable capacitors. Satisfactory results may be obtained by using these coils with tuning capacitors having a maximum capacity of 365 to 480 mmfd. The R.F. coils are impedance coupled, while the Antenna and Oscillator coils have tapped windings.

Dimensions of shield: $\frac{3}{4}$ " sq. x $1\frac{1}{8}$ " high.

Universal Replacement Coils

To meet the needs of the serviceman and experimenter, we have developed a series of small iron core variable inductance coils for the broadcast band. These coils are well suited for general replacement use in receivers where manufacturers' coils are no longer available. The inductance may be adjusted

for use with any variable condenser having a maximum capacity between 250 and 450 mmf. The oscillator coil may be adjusted to track with all intermediate frequency amplifiers between 100 and 550 KC in any type of oscillator circuit. It has a tapped secondary and a primary.

42-RF	R.F. Stage	540-1600 KC	49	1.75

For receiver circuits where a larger coil may be used in order to obtain higher "Q" and gain, also achieving selectivity in T.R.F. circuits comparable with that of smaller superhets. Coils are for use with a 365 mmfd. variable condenser.

Economy T.R.F. Coils

These broadcast band coils were commonly used in early tuned-radio-frequency receivers and are now useful for experimental and low-cost radios or replacement service. Unshielded, inexpensive coils but having very good efficiency. Secondary winding is a single-layer solenoid and the primary is of the low impedance type wound on an adjustable sleeve slipped over the secondary winding. Both coils wound on bakelite tubing. Convenient "L"-type bracket mounting. For use with a standard 0.000365 mfd variable tuning condenser.

Dimensions: $1\frac{1}{8}$ " diameter by 2" high.

Midget Oscillator Coils

Similar in construction to the 5480 series coils, these oscillators may be used with any of the pentagrid converter tubes. They are available for all of the popular intermediate frequencies and may be used with any of the Miller antenna and R.F. coils, as well as for general replacement service. They are for use with a .000365 variable condenser to cover the broadcast band from 540 to 1600 KC. For use unshielded.

Dimensions: 1" diameter by 1" high.

Cat. No.	I.F. Frequency	Series Pad	Schematic	List Price
5480-K	175 KC	.001 mfd.	37	\$1.75
5480-H	262 KC	.0006 mfd.	37	1.75
5480-C	455 KC	.0004 mfd.	37	1.75

Tapped Oscillator Coils

Similar to the #5480 series oscillator coils except that no primary is used and the secondary is tapped for cathode return. For use with type 6SA7 and similar mixer tubes, and when separate oscillator and mixer tubes are used.

Progressive Wound Coils

These coils are used in quality receivers where precision construction and supreme performance are indicated. Secondaries are Litz wire wound. High impedance primaries with capacity coupling, wound on bakelite tubing and for use with a standard .000365 mfd. variable condenser.

Dimensions: 7/8" diameter (form) by 2 3/4" high.

Cat. No.	Use	Unshielded	Range	Schematic	List Price

De-Luxe Oscillator Coils

A solenoid oscillator coil series, for use with the 241 and 242 types of broadcast band coils, commonly used with the converter types of tubes, such as 6BE6, 6SA7, 6K8, etc. Similar in construction and dimensions to the Progressive Wound coils. The indicated intermediate frequencies listed are nominal, and deviations of a few kc are permissible. Where space permits, these coils may be used for general replacement service (for use with receivers having a 540-1750 KC range with .000365 mfd. variable).

Dimensions: 7/8" diameter (form) by 2 3/4" high.

Untuned Antenna and R.F. Coils

These untuned antenna and radio frequency coils are broadly self-resonant throughout the standard broadcast band from 540 to 1700 KC. They are used mostly in AM High-Fidelity Tuners. They may be used for increasing the sensitivity of small receivers by merely adding the coil and a radio frequency amplifier tube. The coils are shielded in aluminum cans and are provided with the #6-32 spade bolts for assembly to the chassis.

Dimensions: 1 5/8" diameter x 2 1/2" high.

Cat. No.	Use	Range	Schematic	List Price
472-UA	Antenna Stage	540-1700 KC	58	\$2.75
472-UT	R.F. Stage	540-1700 KC	105	3.25

Negative Mutual Coupling Coils

These negative mutual coils are used primarily in AM High Fidelity tuners or receivers and are offered to the experimenter and constructor for use in all types of band-pass coupled circuits, such as monitors and aircheck receivers. The coils are bi-filar wound on bakelite forms and assembled in aluminum shields. They may be used with Miller broadcast band radio frequency coils, such as type 242. Coils have mounting brackets separate from the spade bolts used for mounting the shield. May be used unshielded in some circuits.

Dimensions: 1 7/8" diameter x 2" high (shielded).

Cat. No.	Use	Schematic	List Price
EL-56	Negative Mutual Coil, Shielded	62	\$1.50
EL-55	Negative Mutual Coil, Unshielded	61	1.25

Standard Bank Wound Coils

High gain secondaries and high impedance primaries combine to produce an all-around coil for the constructor and serviceman. Have excellent characteristics and exceptional performance. For use with a standard .000365 mfd. variable condenser. Coils are wound on impregnated Kraft tubing. Available both shielded and unshielded. Coils are thoroughly impregnated in low loss tropicalized Q-Max lacquer, insuring satisfactory operation in humid climates.

Dimensions: 5/8" diameter (form) by 2 1/2" high.

Two Band Coils

These high grade two band coils are compactly and efficiently designed to provide a type of coil well suited for marine receivers and for general experimental and custom set builders. Broadcast band windings are duo-lateral wound and short-wave windings are solenoid wound. High frequency trimmer condensers for each band are a part of the coil assembly and are adjustable from the top of the shield. Satin finished aluminum shields measure $1\frac{3}{8}$ " square by 3" high. To be used with a standard .000365 mfd. tuning condenser and a 455 KC I. F. amplifier.

Dimensions: $1\frac{3}{8}$ " square x 3" high.

High Q Unshielded R.F. Coils

A complete line of Unshielded Permeability tuned coils for replacement use or as the front end components in new receiver design. Through the use of the adjustable iron core this series of coils can be made to track with many types of variable condensers to obtain any desired frequency range; the ranges shown are for use with a 365 mmfd. tuning condenser. Oscillator coils are of either the standard plate feedback type or cathode tapped type, and are designed so that it is possible to achieve three point tracking when the proper padding and trimmer capacity values are used. Values of padding condenser are for use with a 455 Kc I.F. amplifier. Mounting is by means of a single $\frac{1}{4}$ " hole. These #5495 series coils can be shielded in our #S-32 shields ($1\frac{1}{8}$ " sq.) with very little loss in Q.

Dimensions (form): $\frac{3}{8}$ " x 2".

Midget R.F. Coils (Shielded)
Permeability Tuned

A compact series of radio frequency and oscillator coils well suited to the needs of the constructor of aircraft, marine and midget broadcast receivers. The coils are of the iron core type and are enclosed in satin finished aluminum shields. Standard antenna coil primaries are of the low impedance close coupled type for use on short vertical or

horizontal aerials. R.F. coil primaries are of the high impedance type for maximum energy transfer when used with pentode amplifier tubes. Frequency ranges given are when used with a standard .000365 mfd. variable tuning condenser. Adjustable iron core permits accurate alignment.

Dimensions: $1\frac{1}{8}$ " square x $2\frac{1}{8}$ " high. #6-32 spade bolt mounting.

High Fidelity FM Tuner

Many features of the Miller 580 F.M. tuner are found only in the more expensive units. The circuit features a permeability tuned R.F. amplifier, mixer, oscillator, two I.F. stages, two limiter stages and a wide band discriminator followed by a cathode follower audio

output stage. Provision has also been made for a multiplex adapter if this should be desired. The front end is completely shielded and exceeds the requirements established by the F.C.C. pertaining to radiation of energy by the oscillator stage. Automatic frequency control in addition to the use of a wide band detector assures drift free reception, provision has also been made to defeat the A.F.C. circuit to allow reception of weaker signals in the presence of stronger signals.

Dimensions: 9" wide x 4" high x 7" deep. Shipping weight 10 lbs.

Cat. No.	Item	Audiophile Net Price
580	F.M. Tuner	\$69.50

FM Variable Condenser

This 3-gang tuning condenser is rigidly constructed with widely spaced plates to avoid microphonics. To insure highest frequency stability, it is recommended to remove mica compression trimmer plates on all three or at least on the oscillator section, and to use ceramic trimmers of suitable value. (3-12 mmf.) Tuning condensers are supplied with a 1/4" shaft. Our FM Signal Frequency Coils are designed for use with them (frequency range 88-108 MC).

Cat. No.	Item	List Price
1461	3-Gang FM Tuning Condenser (5.5-23 mmf)	\$6.00

FM I.F. Transformer (10.7 Mc)

These permeability tuned 10.7 MC intermediate frequency transformers are assembled in aluminum shield 1 1/8" square by 2 1/2" high. Adjustment is from top and bottom of the shield. High "Q" zero drift condensers are used throughout. All connections are made to solder lugs at the base of the transformer. Mounting is by two #6-32 spade bolts on 1 1/16" centers.

Cat. No.	Item	Schematic	List Price
1451	10.7 MC Interstage Transformer	35	\$2.75
1452	10.7 MC Discriminator Transformer	63	3.75
1453	10.7 MC Ratio Detector Transformer	19	3.75

Mounting Clip

Mounting clip #180 is a special device which is inserted through slots in the equipment chassis and locks in the side of the K-TRAN transformer providing a rigid support.

Adapter Plate

Adapter plate #181 is used when the equipment chassis is not punched with the proper mounting holes for the K-TRAN transformers. The adapter plate mounts over a standard octal tube socket hole. Mounting clip #180 is then inserted through slots in the adapter plate.

J-TRAN Alignment Tool

The J-TRAN alignment tool is for use with transformers using cores with hex openings. The tool has a hex head on each end. One of the ends is undercut to permit aligning top and bottom windings of a transformer without going to other side of chassis. Hex portion of tool is .100" wide. See price index for bulk prices.

125 volts at 35 ma and 6.3 volts at 2.5 amps is required.

Cat. No.	Item	Audiophile Net Price
579	F.M. Tuner Assembly	\$37.50

FM-AM Composite

I.F. Transformer, 10.7 Mc & 455 kc

Two permeability tuned I. F. Transformers mounted in the same shield can, one operating at 10.7 MC and the other at 455 KC. All connections are brought out independently. This transformer can be used in the input, intermediate and output stages of the I. F. amplifier by providing jumper connections. In a conventional AM-FM receiver, two of these transformers, followed by Cat. No. 1453 ratio detector, may be used. Mounting: Two #6-32 spade bolts on 1 1/16" centers.

Dimensions: 1 3/8" by 1 3/8" by 2 1/2" high.

Cat. No.	Item	Schematic	List Price
1462	10.7 MC/455 KC I. F. Transformer	64	\$5.50

FM Signal Frequency Coils

R.F. coils for the 88-108 mc FM band redesigned for higher Q values to give improved selectivity and higher gain. Made of hard-drawn copper wire wound in a self-supporting rigid form. Enclosed in aluminum shields to minimize stray coupling. All connections are made to solder lugs at the base of the shield. Two #6-32 spade bolts are used for mounting to the chassis. Use with No. 1461 variable condenser.

Dimensions: 1 1/8" by 1 1/8" by 2 3/8" high.

Cat. No.	Item	Schematic	List Price
1454	88-108 MC Antenna Coil	60	\$2.75
1455	88-108 MC R.F. Coil	59	2.75
1456	88-108 MC Oscillator Coil (10.7 MC I.F.)	58	2.75

FM Adjustable R.F. Coils

Signal frequency coils for the 88 to 108 megacycle band are permeability tuned by means of a high frequency powdered iron core. The tuning feature makes it possible to compensate for differences in lead lengths and for capacity variations of the variable capacitor (Cat. No. 1461 recommended). These coils are designed for mounting under the chassis, but could also be mounted above the chassis or on a separate bracket. Mounting clip fits into 1/16" diameter hole.

Cat. No.	Item	Schematic	List Price
1447	88-108 MC Antenna Coil	48	\$1.85
1448	88-108 MC R.F. Coil	7	1.85
1449	88-108 MC Osc. Coil (10.7 MC I.F.)	7	1.85

VHF High-Q R.F. Coils

The unique construction of these VHF coils permits extremely close inductance control with better-than-average Q-values and excellent stability which is so necessary for mobile work. The secondary circuit is formed by a tongue punched from the side of the copper shield. Can be used with conventional tubes from about 110 to approximately 235 mc. Upper frequency limit controlled principally by capacity of wiring and tubes with which coils are used. In best operating range, unloaded Q-values in neighborhood of 200. (Shield of copper and silver plated.)

Dimensions: 1 1/8" by 1 1/8" by 2 3/8" high.

Cat. No.	Item	Schematic	List Price
1444	110-235 MC Antenna Coil	60	\$6.10
1445	110-235 MC R.F. Coil	60	6.10
1446	110-235 MC Oscillator Coil	60	6.10

Sub-Miniature I.F. Transformers

We are now able to supply a 455 kc intermediate frequency transformer which has all the desirable features of the conventional size I.F. and is smaller than a MINIATURE tube. Through the use of a Ferrite shell core material these Sub-Miniature I.F. Transformers offer the gain and bandwidth characteristics previously obtained in only larger I.F. assemblies.

It is now possible to construct personalized receivers smaller than ever before.

For AC-DC or Battery Radios.

Dimensions: $\frac{1}{2}$ " square by $1\frac{1}{2}$ " high.

Cat. No.	Item	Schematic	List Price
10-C1	455 kc Input Transformer	35	\$2.80
10-C2	455 kc Output Transformer	35	2.80

Permeability Tuned Transformers

Miller permeability tuned intermediate frequency transformers are recommended for all applications where a high degree of frequency stability and operation under humid conditions will be encountered. Zero-drift silvermica condensers are used. The two iron core adjusting screws are accessible from the side of the aluminum shield and are provided with screw-driver slots. Transformers are of the tuned-plate, tuned-grid type and have excellent gain and selectivity characteristics. An internal spring clip locks against the adjusting screw threads and prevents vibration from affecting the adjustment.

Dimensions: $1\frac{1}{8}$ " square x $3\frac{1}{4}$ " high. #6/32 spade bolt mounting.

Midget Perm. Tuned Transformers

These Miller permeability tuned intermediate frequency transformers are similar in construction to our standard series 912, except that they are assembled in aluminum shields measuring only $1\frac{1}{8}$ " square by 2" high. All of the desirable features of permeability tuning have been retained in this compact transformer and it is particularly recommended for use in battery portable receiver and for small aircraft receivers. Tuning adjustment is from the side of the shield.

Dimensions: $1\frac{1}{8}$ " square x 2" high. #6/32 spade bolt mounting.

Miniature I.F. Transformers

Designed for experimental use and for general replacement in "personal" radio receivers, this series of shell core permeability tuned transformers are becoming increasingly popular. Tuning from top and bottom of the shield. Transformers are available for all standard I.F. frequencies. Supplied with a mounting clip which may be installed through suitable holes in chassis.

Dimensions: $\frac{3}{4}$ " by $\frac{3}{4}$ " by 2" high.

Miniature Printed Circuit I.F. Trans.

This series of miniature I.F. transformers have been specifically designed for printed circuit applications. They may be used in new equipment design, or as replacement transformers in receivers presently on the market.

Same as our regular miniature I.F. transformers shown above, except for terminals and mounting. Supplied in all standard I.F. frequencies.

*(With diode filter capacitors)

Dimensions: $\frac{3}{4}$ " sq. x 2" high. Schematics same as above.

Exact Replacements for Original Equipment

In addition to our regular replacement coil and transformer listing we are now offering the following special replacement items which fill an ever increasing demand due to the large number of receivers in use which will require service.

The following parts have been manufactured as exact replacements for the original equipment produced by the manufacturer. These items cover the more popular replacement I.F. transformers and coils found in various home radios, auto radios and television receivers. In cases where the manufacturer has incorporated in either the physical or electrical design an innovation which has resulted in a special part, the only way to assure top performance is to use an exact replacement item.

Sub-Miniature Transistor I.F. Transformers

To our knowledge the smallest I.F. transformers in existence. Cup core construction permits the use of extremely small shields without adversely affecting transformer operation. A high impedance, tapped primary winding coupled to a low impedance secondary provides optimum energy transfer between stages.

Dimensions: 3/8" sq. x 5/8" high.					
Cat. No.	Freq.	Impedance	Use	Schematic	List Price
9-C1	455 KC	25K—600 Ohms	Input	72	\$4.00
9-C2	455 KC	25K—1000 Ohms	Output	72	4.00

Miniature Transistor I.F. Transformers

Miniature I.F. transformers having tuned primary and untuned secondary windings. The primary winding is tapped for use in circuits which require a tap. In circuits which do not use a tap it is disregarded. Proper impedance match between primary and secondary insures optimum performance.

Dimensions: 1/2" sq. x 3/4" high.					
Cat. No.	Freq.	Impedance	Use	Schematic	Price

2051	455 KC	100K—1000 Ohms	Input	72	3.50

Miniature J-Tran Top Tuned I.F. Transformers

The standard J-TRAN series of miniature I.F. transformers has hollow hexagonal-hole cores and thereby, with the aid of a suitable tuning tool (#182), permits either double or single ended tuning. The transformer is mounted with a unique snap fastener which is permanently attached to the shield. The fastener provides a positive ground connection for the shield without the necessity of an extra soldering operation.

Miniature Printed Circuit Top Tuned I.F. Transformers

The printed circuit series of miniature J-TRAN I.F. transformers is similar to the standard J-TRAN shown elsewhere on this page in that both cores may be tuned from either end of the shield. If both ends are accessible it can be tuned from both ends, but if access to one end is restricted or inconvenient, both cores can be tuned from the same end. The ground lugs on the shield are specially designed to engage the printed circuit board and hold the transformer in place while the terminal lugs are soldered.

10.7 MC Transistor Transformers

A complete series of I.F. Transformers specifically designed for operation with transistors in intermediate frequency stages operating at 10.7 megacycles. Proper impedance matching is assured when these transformers are used with the specified transistor shown on our data sheet. Through the use of a Discriminator, maximum efficiency, and good limiting of the F.M. signal are assured.

Air Core Transformers

These air core transformers have for many years been the standard for general replacement and experimental use. They have moderate gain and excellent stability and are suitable for use in either single or two-stage amplifiers. In most cases the input stage is adjusted to optimum coupling and the interstage units are adjusted to slightly greater than optimum. The ceramic compression trimmers used on these transformers have been stabilized by a heat-cycling process which reduces temperature capacity drift to a minimum. The full-wave and half-wave types are overcoupled. All transformers are supplied with color coded leads.

Dimensions: 1 3/8" square x 2 5/8" high. #6/32 spade bolt mounting.

Variable Selectivity Transformers

Miller Variable Selectivity intermediate frequency transformers have been designed to meet the demand for a unit having both selectivity and broad frequency response. This is accomplished by a simple electrical circuit, devised by Miller Engineers, which has the effect of changing the coupling, although no mechanical coupling adjustments are made. A simple single pole, double throw switch is all that is required for a single stage of amplification. The two positions of the switch provide for sharp and broad tuning. In the broad position, the band width is approximately twice that of the sharp position for the particular type of transformer being used.

512 Type Dimensions: 1 3/8" square x 2 5/8" high.

Perm. Tuned I.F. and Discriminator Transformers

These new transformers are tunable from top and bottom of the aluminum shield. They can be used in either AM or narrow-band FM receivers.

Discriminator transformers, for frequency modulation reception, are of the Foster-Seeley type. Output transformers are for use in the amplifier stage preceding AM detection. Input or interstage transformers are for either AM or FM (Our best.)

For use in communications receivers designed for AM or Narrow Band FM. These transformers feature high gain along with a high degree of frequency stability.

Dimensions: 1 3/8" sq. x 2 1/2" high. #6-32 spade bolt mounting.

Cat. No.	Frequency	Use	Schematic	List Price
913-C1	455	Input & Interstage	35	\$3.50
913-C4	455	Output	35	3.50

913-WD	1500	Discriminator	20	3.90

1500 KC I.F. Transformers

These miniature permeability-tuned i.f. transformers are useful for amateur or commercial double-conversion communication receivers. Convenient also for experimental use or other applications requiring a small-size transformer for operation in the 1500-kc range. In spite of their small dimensions, only the highest quality parts and workmanship have been used in their construction. Tuning slugs are adjustable from top and bottom of the

aluminum shield. All connections are made to solder lugs projecting from the bottom of the transformers. Convenient #4-40 spade bolt mounting.

Dimensions: 3/4" by 3/4" by 2" high.

Cat. No.	Description	Range	Schematic	List Price
12-W1	Input or interstage	1400-1600 KC	35	\$3.00
12-W2	Half-wave output	1400-1600 KC	35	3.00

Iron Core Transformers

These Miller intermediate frequency transformers are constructed using a core of high quality powdered iron material designed for use at radio frequencies. Use of this material gives the transformer better gain and selectivity than that obtainable in similarly constructed air core types. A single stage of Miller Iron core transformers will often have the same gain and selectivity as that of a conventional two stage amplifier using air core transformers.

Dimensions: 1 3/8" square x 3 1/4" high. #6/32 spade bolt mounting.

Cat. No.	Frequency	KC Range	Use	Schematic	List Price

Midget I.F. Transformers

These mica compression tuned intermediate frequency transformers are well suited for use in small receivers of all types. They measure only 1 1/8" square and 2" high. In spite of their small size, only the highest quality of parts and workmanship has been used in the construction of these transformers. Tuned-plate, tuned-grid construction provides excellent gain and selectivity.

Dimensions: 1 1/8" square x 2" high. #6/32 spade bolt mounting.

Converter Output Transformers

These transformers are commonly used with UHF converters and remote control tuners for broadcast band receivers. The transformer consists of a tuned plate winding to be connected in the plate circuit of the converter mixer tube, and a low impedance output winding which is generally connected to the antenna-ground terminals of the receiver. Miller stabilized mica compression trimmer permits tuning to desired frequency. Transformer is assembled in a satin finished aluminum shield.

Dimensions: 1 3/8" square x 2 5/8" high. Spade bolt mounting.

Universal I.F. Transformers

This series of transformers is finding wide application for general replacement purposes in auto receivers and many types of household and portable receivers. They combine high gain and excellent stability with compact physical size. Color coded leads are supplied. The ceramic compression trimmers used on these transformers have been stabilized by a heat-cycling process which reduces temperature capacity drift to a minimum. 312-C6 and 312-H6 have built-in printed circuit diode load and a.v.c. filter.

Dimensions: 1 1/4" square x 2 1/2" high. #6/32 spade bolt mounting.

Cartwheel I.F. Transformers

A compact double tuned, unshielded intermediate frequency transformer which will find wide application as a replacement for many receiver types using odd shaped transformers which may not be readily available. Particularly useful in compact and midget AC-DC receivers. Since the windings are mounted in a horizontal axis, considerable space is saved. Overall dimensions only 1 3/8" square by 1 1/2" high. Single #6/32 machine screw mounting.

Cat. No.	Frequency	KC Range	Use	Schematic	List Price
1212-C	455	425-500	All Stages	55	\$2.50

Regenerative I.F. Transformers

Miller Regenerative I. F. transformers are of the tapped cathode type and are used in electron coupled feedback circuits. Most commonly used to improve the gain and selectivity of amateur and experimental receivers and for CW receivers. The transformers are of the mica compression tuned type and are available in either air core or iron core type. Both primary and secondary windings are tuned and the trimmer condensers are stabilized to maintain frequency adjustment. The aluminum shields are satin finished and are provided with #6/32 spade bolts for mounting to the chassis.

Dimensions: 1 3/8" square x 3 1/4" high.

50 KC Transformers

For the McLaughlin SSSR Adapter

The J. W. Miller Company was privileged to work with Mr. J. L. A. McLaughlin throughout the design of the 50 KC transformers for use with the McLaughlin SSSR (Selectable Single Sideband Reception) adapter described in the April, 1948, issue of "QST" magazine. The SSSR adapter may be used with any receiver having an intermediate frequency of 450 to 465 KC. Complete operating data and theory of operation will be found in Mr. McLaughlin's article.

Dimensions: 1 3/8" by 1 7/8" by 3 1/4" (except #4527).

Cat. No.	Description	Range	Schematic	List Price

Wire Recorder Oscillator

Bias or Erase Coils

These permeability-tuned coils are intended for replacement service or use as components in original design of wire recording equipment. They are useful also in experimental applications requiring high-quality tuned transformers in the 60-100 kc range. Windings are of good quality with better than average Q-values. Silver-mica capacitors are included to realize excellent frequency stability. Two windings are used in the assembly: one, a tapped coil for wiring in conventional oscillator circuits; the second, to function as a tuned pick-up winding which can be coupled directly to the erase head. As an alternative application these coils may be included in an oscillator circuit to generate supersonic bias voltage for extra high-fidelity wire recording. By omitting connection to winding tap, coils also may be considered as tuned interstage transformers in special applications such as carrier-current communication or telemetering systems. Their wide tuning range is particularly convenient for such purposes. Coils are contained in aluminum shield with tuning cores of both windings adjustable from the side. Spade bolts of #6-32 thread for easy mounting. Color coded leads are provided at bottom of shield.

Dimensions: 1 3/8" x 1 7/8" by 3 1/4" high.

Cat. No.	Description	Range	Schematic	List Price
1886-M	100 KC Osc. Erase Coil	95-105 KC	56	\$8.25
1887-A	60 KC Osc. Erase Coil	58- 62 KC	56	8.25

Beat Frequency Oscillators

Miller Beat Frequency Oscillator transformers are of the tapped winding type for use in cathode-coupled (electron-coupled) circuits. They are a necessity for the reception of CW signals on amateur and commercial receivers. They are also used for "beat note" tuning of weak stations. Frequency adjustment is made by means of a knob accessible at the top of the shield—or a separate low capacity air dielectric condenser may be used for front-of-panel control.

Permeability Tuned 50 KC Coils

Stagger-tuned band pass

During recent years, the trend towards lower frequencies in the I.F. amplifier stages of receivers to obtain a greater degree of selectivity has resulted in the use of single high "Q" coils coupled together by means of a small capacitor, rather than the conventional mutual inductance coupled circuits. The following types of coils are manufactured to meet the requirements of new receiver design where the best possible selectivity characteristics are desired. Constructional articles appearing in December, 1950 and March, 1953 issues of QST, and recent editions of the ARRL handbook offer complete circuit applications. Part No. 1884 uses "Cup Core" construction, which makes possible a coil having a "Q" of 100 or better, while also reducing the short circuited turn effect of the shield. Part No. 1885 uses regular construction, and is intended for applications where a "Q" of 60 is satisfactory. The inductance value at 50 KC for both coils is 25 MH when the iron core is adjusted to obtain resonance. These coils are individually tested, and inductance variations are held to $\pm 5\%$, and Q values to $\pm 10\%$ to assure the user of a high quality component. (Cat. #1885 illustrated)

Dimensions: 1 3/8" square x 2 1/2" high. #6/32 spade bolt mounting.

Cat. No.	Description	Range	Schematic	List Price
1883	50 KC BFO	48-52 KC	68	\$3.25

1885	25 MH Q 60	48-52 KC	69	3.25

Our #1883 BFO coil is of construction similar to the #1885, completing this series of special 50 KC I.F. coils.

100 KC High-Q Transformers

Special iron-core 100-kc i.f. transformers similar in construction to 50-kc but including very high Q windings to give exceptionally sharp selectivity tuning characteristic. Useful for amateur or commercial double-conversion communication receivers and circuits requiring stable, high-quality i.f. transformers of unusually narrow frequency response. Designed for relatively high gain combined with excellent stability. Silver mica capacitors insure a minimum of temperature frequency drift. Primary and secondary tuning from side of aluminum shield. Color coded leads are supplied.

Heavy Duty Hash Chokes

Through the use of a molded powdered iron form we are able to offer a series of relatively high inductance, high current hash filter chokes in a minimum of size. The chokes are designed to prevent ignition and generator interference noise pick-up from battery wiring systems and from vibrator and motor-generator plate supply systems. Although used primarily as a hash filter the chokes are also satisfactory as parasitic suppressor chokes and find use in a number of other applications where high current carrying capacity is required. The standard stock item is supplied impregnated with a moisture resistant varnish. On special order we will supply the chokes fungus-proofed or encapsulated in Epoxy Resin to meet MIL-C-15305-A.

Dimensions: $\frac{5}{16}$ " diameter x $1\frac{1}{4}$ " long.

Deluxe 10 KC Bridged T Whistle Filter

The EL-57 whistle filter has been designed for the express purpose of eliminating the 10 kilocycle beat note characteristic of broad band AM tuners.

The 10 kc note is the result of the heterodyning of two transmitter carriers operating at a frequency difference of 10 kilocycles. The only practical means of eliminating this condition is through the use of a filter such as the EL-57. Designed solely for use with high fidelity installations, the filter has extremely sharp cut-off characteristics to insure minimum attenuation of frequencies either side of the center frequency. This enables the user to maintain full reproduction of the transmitted signal with only the loss of the 10 kc note.

The EL-57 utilizes high quality ferrite cup cores and employs resistance compensation in the form of a potentiometer which serves as the notch depth control. A ferrite tuning core controls the center frequency and is adjustable from 9-11 kc. The notch depth control provides a maximum center frequency attenuation of 35 db. The frequency response of the filter is down 3 db @ ± 100 cycles from center and

only .5 db @ ± 200 cycles. Insertion loss is less than .5 db. The filter is intended to be installed in the plate circuit of the first audio stage of the amplifier.

Dimensions: $1\frac{3}{8}$ " x $1\frac{7}{8}$ " x $2\frac{1}{2}$ " high.

Cat. No.	Use	Schematic	List Price
EL-57	10 KC Filter	120	\$12.00

Phono-Oscillator Coil

The Miller Phono-Oscillator coil is used in the construction of radio operated phonograph players. The coils are permeability tuned and are assembled in an aluminum shield. The frequency range as provided by the adjustable iron core is from 540 to 700 KC. The windings are of the sectional duo-lateral type. The oscillator grid leak and grid coupling condenser are included in the coil assembly. A typical circuit diagram is supplied with each coil.

Dimensions: $1\frac{1}{16}$ " square x $2\frac{1}{2}$ " high.

522	Phono-Oscillator	540-700 KC	92	\$4.50

Teletype Radio Interference Filter

A compact skeleton type filter using both inductance and capacity for maximum effectiveness in suppressing the interference generated by the small brush-type universal motors used on teletype printers. The filter is constructed for fastening directly to the motor terminals and is easily installed. The two duo-lateral chokes are wound on bakelite tubing and the dual condenser is fastened inside of the tube. A ground terminal is provided for connection to the motor frame. May be used on AC or DC circuits up to 220 volts and at a maximum current of .5 ampere.

Dimensions: $1\frac{3}{8}$ " diameter x 3" high.

7812	220	.5	10	\$5.75

Filament Chokes

Designed to prevent ignition and generator interference noise pick-up from battery wiring systems and from vibrator and motor-generator plate supply systems. Choke consists of a single-layer solenoid with wire leads and encased in a round Kraft tube with sealed ends. To avoid excessive voltage drop, several chokes are often used—one choke in each of the following circuits—filament, vibrator or motor-generator and filament of rectifier tube (if used).

Dimensions: $\frac{3}{4}$ " diameter by $1\frac{7}{8}$ " long.

Cat. No.	Uh.	Ohms	Amperes	Schematic	List Price
5221	4	.02	6	1	\$1.25

Plate Supply Chokes

A companion choke to the #5221 filament choke for use in the power supply of battery and generator or vibrator "B" supply packs for portable or mobile radio and electronic equipment. Will prevent interference and r.f. "hash" present in the power source from interfering with normal operation of the equipment. Unit is a duo-lateral wound coil enclosed in a sealed Kraft container and provided with convenient axial wire leads. Insulated enclosure permits mounting in out-of-the-way corners of the chassis.

Dimensions: $\frac{3}{4}$ " diameter by 1" long.

Cat. No.	Mh.	Ohms	MA	Schematic	List Price
5222	2.5	28	200	1	\$1.50

Rectifier Hash Filter Chokes

Duo-lateral wound chokes for use in series with the plate leads of mercury vapor rectifiers to prevent r.f. hash feed-back. The chokes are wound on Alsimag forms and have solder type lugs for connection. Two hole mounting brackets prevent the choke from turning. The terminal lugs are eyeleted to a canvas base bakelite strip and provide a spacing of $1\frac{1}{2}$ " between connections. The insulation to ground will withstand in excess of 10,000 volts.

Dimensions: 2" diameter x $2\frac{3}{8}$ " high.

Cat. No.	Mh.	Ohms	MA	Schematic	List Price

TV High-Pass Filter

This TV High-Pass Filter will eliminate or greatly reduce annoying interference which may be picked up by the intermediate-frequency amplifier section of your television receiver. Improves picture clarity by rejecting interference from short wave stations, amateur transmitters, X-Ray and diathermy equipment, industrial r.f. heating units, electric appliances, etc. Clear, steady pictures insured with a minimum of noise streaks, sound bars or herringbone. Filter is designed to attenuate all signals from zero frequency to 40 megacycles. All television channels passed with minimum loss. No tuning required. Installed easily in antenna lead-in receiver. In aluminum shield with convenient "L"-type bracket for mounting.

Dimensions: 1 $\frac{1}{8}$ " by 1 $\frac{7}{8}$ " by 3 $\frac{1}{2}$ " high.

6168	TV High-Pass Filter—300-ohm line	47	6.25

TV and Appliance Filter

Similar in construction to the Cat. No. 7818, the Cat. No. 7815 is designed for use with larger household appliances and commutator-type motors as well as communications-type receivers and recording equipment. Useful for elimination of TV interference in radio receivers when inserted in television receiver line cord. The #7815 filter uses larger capacitors and heavier capacity inductors to handle load requirements up to 550 watts. It is assembled in a gray Hammertone finished case.

Dimensions: 2 $\frac{1}{4}$ " square x 4" long.

Cat. No.	Volts	Watts	Schematic	List Price
7815	115	550	11	\$13.75

AC-DC Radio Filter

The Cat. No. 7813 is an All-Wave Interference Filter designed expressly for use on AC-DC radio receivers where the commonly used D.C. circuits require a filter having different characteristics than those for A.C. circuits, for greatest effectiveness. The Cat. No. 7813 Filter plugs-in between the power outlet and the radio receiver.

Dimensions: 2 $\frac{1}{4}$ " square x 5" long.

Cat. No.	Volts	Watts	Schematic	List Price
7813	115	220	11	\$12.95

Electric Shaver Filter

This filter contains an inductive-capacitive circuit consisting of two duo-lateral wound chokes and a non-inductive condenser, giving complete freedom from radio interference. Most electric shavers act as miniature radio transmitters and feed interference energy into the house wiring and it is then picked up by the radio receiver. The Miller Electric Shaver filter, connected between the electric shaver and the convenience outlet, effectively absorbs this interference energy and prevents it from being picked up by the radio receiver. No ground connection is needed for the filter and the danger of accidental shock is avoided through the use of shock-proof, unbreakable moulded rubber construction.

Dimensions: 1 $\frac{1}{8}$ " diameter x 3" long.

Cat. No.	Volts	Watts	Finish	Schematic	List Price
7817	115	50	Black	14	\$4.00
7817-1	115	50	Ivory	14	4.00

TV and FM Wave Traps

These new high-Q series-resonant wave traps may completely eliminate interference and undesirable images in television and FM receivers. When tuned to the frequency of interfering signal, they are very effective in reducing sound bars and herringbone patterns, or streaks and tearing in the television picture. Superimposed pictures from two different stations also may be prevented. For FM receiver use, cross-talk from interfering station is greatly diminished. Use of one of these traps generally will

reduce interference caused by a near-by transmitter to a degree which will permit satisfactory reception from a weaker station.

Dimensions: 1 $\frac{3}{8}$ " by 1 $\frac{7}{8}$ " by 3 $\frac{1}{2}$ " high.

Cat. No.	Frequency Range	Schematic	List Price
6163	150-250 MC	45	\$5.00
6164	75-150 MC	45	5.00
6165	40-80 MC	45	5.00
6166	20-40 MC	45	5.00

All-Wave Interference Filter

Designed to eliminate radio noises caused by small household appliances such as food mixers, sewing machines, vacuum cleaners, etc. When connected between the radio receiver and the power outlet, the filter will prevent pick-up of interference and unwanted signals through the house wiring system. When used with household appliances the filter prevents the interference energy from getting into the house wiring circuit and disturbing receivers throughout the neighborhood.

Dimensions: 2 $\frac{1}{4}$ " square x 4" long.

Cat. No.	Volts	Watts	Schematic	List Price
7818	115	220	13	\$12.50

Capacity Type Line Filter

The Miller Capacity Line filter is an all purpose filter for the elimination of radio interference caused by the operation of household appliances such as electric razors, heating pads, hair dryers, food mixers, vacuum cleaners and practically all common household devices and fractional horsepower motors. This filter will provide adequate filtering in less severe cases of interference and in instances where the cost of Miller Inductive-Capacitive type filters is not warranted. A bakelite receptacle at one end and one foot long cord with plug at the other end makes installation simple.

Dimensions: 1 $\frac{1}{8}$ " diameter x 2 $\frac{3}{8}$ " long.

Cat. No.	Volts	Watts	Schematic	List Price
7816	115	660	15	\$3.00

Un-Cased Interference Filters

These filters utilize two duo-lateral wound chokes and a dual .2 mfd. non-inductive wound, oil impregnated condenser. The filters are assembled on 1" diameter bakelite tubes and are provided with solder-type terminals and brass mounting brackets. While designed primarily for use with traffic signals, its usefulness is by no means limited to this application. These filters may be used for built-in application with any type of radio interference producing electronic device whose voltage and current requirements are within the rating limits of the filters.

Dimensions: #7880—2 $\frac{1}{4}$ " diameter x 5" long; 90 uh; .125 ohms; dual .2 mfd. condenser.
#7881—3 $\frac{1}{4}$ " diameter x 5" long; 125 uh; .065 ohms; dual .2 mfd. condenser.

Industrial Filters

Miller industrial filters are designed for all types of radio interference producing devices and are highly effective at broadcast and short wave frequencies. The unique filter circuit, consisting of two duo-lateral wound chokes and two single layer solenoid chokes combined with two 2. mfd. non-inductive wound paper dielectric condensers.

For AC or DC to 220 volts. Full-load voltage drop is approximately 2 volts.

Dimensions: 9 3/4" x 6 1/2" x 5" high. Weight: Approx. 14 lbs.

Cat. No.	Volts	Amps.	Schematic	List Price
7841	220	5	12	\$66.00
7842	220	10	12	70.00
7843	220	20	12	72.50

7845	220	40	12	77.50

Tower Lighting Chokes

Duo-lateral wound chokes designed for use in the tower lighting circuits of broadcast and commercial transmitter antenna towers. These chokes offer high impedance to radio frequency and have extremely low distributed capacity. Low power-frequency reactance and DC resistance insure minimum lighting power loss. The chokes are wound on ceramic forms and the windings are of the two-pi sectional type and are protected by a baked glyptal varnish. One

choke should be used in series with each line of the tower lighting circuit. A suitable weatherproof cabinet should be used to house the chokes and is preferably mounted at the base of the tower.

By-pass condensers from line-to-ground are NOT used with these chokes.

Dimensions: 4" diameter x 4 1/2" long.

Cat. No.	Amps.	Ohms	Mh.	Schematic	List Price
7870	5	.56	1.20	1	\$8.00
7871	10	.30	.75	1	9.50
7872	20	.17	.45	1	10.75

Fluorescent Lighting Filter Chokes

The interference energy which is fed back into the AC lines may often affect the operation of radio and television receivers within a radius of several hundred feet. This interference energy may be absorbed by the use of suitable filter chokes and condensers. Miller Fluorescent filter chokes effectively block line interference feed-back and may be simply installed in the lighting fixture. The chokes are assembled in aluminum shields 1 1/4" in diameter by 1 1/2" long, provided with a single hole mounting bracket, and flexible approved wire leads. Installation instructions supplied with each choke. Normally, two chokes should be used per fixture, each choke having a rating equal to the total wattage of all lamps in the fixture.

Replacement I.F. Trap

The 817-H I.F. trap is a direct replacement for Bendix (Sylvania) part No. 118-0009. It is used in Ford Auto Radio Model 1CF743 (1A-18805-B). For schematic diagram and typical application refer to Photofact Folder No. 133-7.

Dimensions: 1 1/8" sq. x 1 1/4" high.

Cat. No.	Use	List Price
817-H	265 KC I.F. Trap	\$5.25

Miller Uni-Filters

Universal type filters adaptable to any filter application through the simple process of making the necessary internal connections. They are designed for preventing feed-back into the power lines from interference producing devices such as—farm lighting plants, electric refrigerators, diathermy and electrocautery devices, oil burner ignition systems, sign flashers, rotary converters, vibrator type converters, portable gas-electric plants and electric motors. Two capacitor blocks, each consisting of dual condensers, are included

with each Uni-Filter. The condensers are rated at 220 volts AC or DC. Complete data and circuit diagram supplied with each filter.

Dimensions: 8" long x 6 1/4" wide x 4 3/4" high.

Loop Antenna Wave Traps

A series of wave traps designed especially for use with all receivers using broadcast band tuned circuit loops. These traps are similar in construction to our # 811 series but are connected as a series resonant circuit. They are to be connected between the grid terminal of the loop antenna and the ground or grid return circuit of the receiver. When tuned to resonance these traps offer extremely low impedance to the interfering signal.

Dimensions: 1 3/8" square by 1 3/4" high.

Shielded Wave Traps

Miller 812 Series Wave Traps reaches a new high of performance in the elimination of interference from CW and amateur phone stations and from commercial transmitters. A completely shielded high "Q" parallel resonant circuit. The units are easily installed, simply connect them in series with the antenna. In order to eliminate interference from more than one station connect several of these units in series. The traps will not interfere with the operation of the receiver

at frequencies other than that to which the traps are tuned.

Dimensions: 1 1/8" square x 2 1/2" high.

Medium Duty Duo-Lateral Line Filter Chokes

Miller Duo-Lateral wound chokes combine small physical size with low distributed capacity—an essential requirement for radio interference filter chokes—and are characteristics found in no other type of radio interference filter choke. These chokes are particularly recommended to manufacturers of farm lighting plants, sign flashers, signal systems, oil burners, diathermy equipment and all types of intermittent switching systems. Miller Duo-Lateral wound filter chokes are specially designed for technicians and electricians who find it desirable to construct their own filters as a part of the equipment being manufactured. When used with amateur and commercial transmitters, filters constructed with Miller Duo-Lateral wound chokes will prevent feed-back into the power line, thus eliminating carrier radiation within the electrical wiring system. Miller Duo-Lateral wound chokes are wound on ceramic forms with suitable brass terminals.

Cat. No.	Amperes	Ohms	Mh.	Dimensions	Schematic	List Price

Heavy Duty Line Filter Chokes

Miller Heavy Duty Line Filter Chokes are wound on electrical porcelain forms measuring 4" in diameter by 8" long. All windings are of the duo-lateral type and use double cotton covered stranded cable expressly made for this purpose. Copper terminal lugs and brass bolts are used on all current-carrying parts. Four sturdy steel mounting brackets are provided with each choke. Windings are thoroughly impregnated with glyptal varnish and baked. In

addition to their use for radio interference filter applications, these chokes find wide application in power circuits and high voltage rectifier circuits to reduce the peak value of transient surges and thus protect valuable equipment and switch gear. (Available from Los Angeles stock only.) (D-7830 is a dual type—two chokes on one form. Illustrated.)

High Tension Filter Chokes

Through extensive research, Miller has developed what is believed to be the only satisfactory filter choke for the elimination of radio interference generated by high-tension (secondary circuit) neon sign animators and tubing. Chokes are sectional wound on ½" diameter by 2½" long ceramic forms and are enclosed in a weatherproof bakelite shell. All windings are impregnated against moisture absorption and all hardware is cadmium plated. The #7875 choke is insulated for 15,000 volts and for continuous operation at currents up to 100 milliamperes. The filter chokes are easily installed in existing installations and they are fully guaranteed. Many cities and communities have radio interference ordinances and these chokes are

an indispensable part of every neon sign installation. Each installation requires one choke per circuit, plus one for the common circuit of the transformer and one for the common circuit of the animator. A complete circuit diagram is supplied with each choke.

Dimensions: 1⅞" diameter x 3¼" high.

Cat. No.	Volts	Amperes	Schematic	List Price
7875	15,000	.1	1	\$3.50

Radio Interference Filter Condensers

Highest quality paper dielectric condensers especially developed for radio interference filter use. While rated at 220 volts AC-DC, these condensers are designed to withstand transient surges up to 1000 volts. Extremely low reactance to all interference frequencies is obtained by non-inductive construction. The condensers are vacuum impregnated and sealed with wax. Assembly in oval cardboard tubes having rock wax end seals prevents any possibility of moisture absorption.

They will give a life-time of trouble-free service and we give an unqualified guarantee against breakdown when used with interference filters on circuits having a maximum RMS voltage not exceeding 220. Available in single and double types as listed below.

Cat. No.	Capacity	Volts	Dimensions	List Price

Midget Variable Condensers

These midget variable condensers have the same precision construction as our standard series and will find ready application in the construction of portable and compact receivers of all types. Split outer plates on the rotors permit accurate alignment. High frequency trimmers are provided on the short side of the condenser. Mounting is provided by tapped holes in the frame of the condenser. Maximum rotor swing is 1". Counter-clock rotation for capacity increase. Shaft is 1/4".

Capacity range—10 to 365 mmf.

Cat. No.	Sections	Dimensions	List Price
2111	1	1 1/8" x 1 1/16" x 1 5/8"	\$3.25

2113	3	3 3/16" x 1 3/16" x 1 5/8"	5.50

De-Luxe Variable Condensers

These variable tuning condensers are the finest standard type obtainable. Rigid construction and adequate plate spacing insures permanence of calibration and freedom from microphonic tendencies. All sections are maintained to within 1.5 mmfd. of each other at any percentage rotation for perfect tracking. Each section is provided with a high frequency adjustment condenser. Latest design and construction features are embraced in the design of these condensers. All condensers are counter-clockwise rotation from shaft end for capacity increase. Use with our No. 152 Dials.

Capacity range—11 to 365 mmfd. 3/8" shaft dia.

Adjustable Padding Condensers

These adjustable oscillator padder condensers are of the finest quality mica-compression type with ceramic body. Capacity adjustable from both top and bottom of condenser. Single hole mounting by means of a 1/4" threaded stud, supplied with nut. Plates may be removed for lower capacity ranges, or shunt mica condensers may be used for higher capacity.

Used as adjustable oscillator padding condenser in super-het receivers to insure proper three-point tracking. They also find application as the horizontal drive control in television receivers.

SYMBOLS USED FOR TELEVISION REPLACEMENT GUIDE

- | | |
|--|---|
| ① Mounting difference | ⑥ Parallel with the resistor or condenser shown |
| ② Disregard secondary | ⑦ Disconnect external condenser |
| ③ Mount in original can | ⑧ Add part shown externally |
| ④ Use adapter plate supplied with unit | ⑨ Disregard tap |
| ⑤ Detune unused section | |

[illegible]

The more than 1,000 items shown in our regular catalogue are backed by thirty-five years experience in the radio and television business. Every Miller product is fully guaranteed against any defect in material or workmanship. This guarantee is made possible by the fact that each and every item is thoroughly tested and inspected before shipment.

The Radio Parts Distributor who supplies Miller Quality Products is your personal contact with the Miller organization. He is able to give personal attention to your individual problems and is always ready to assist you in making the proper selection of Miller Products. His honesty and business integrity assure you of fair and courteous treatment. Always feel free to take any problems concerning Miller Products direct to your Distributor. As our representative, your Radio Parts Distributor maintains the policies of the Miller Company. You will always receive prompt and efficient service by dealing with your Distributor.
